

Number Guessing Game in C++

A simple interactive game where users guess a randomly generated number.

Created by : Keroles Hanaey

ID : 245454

Program Idea

Random Number

Generated between 1 and 100

User Interaction

User inputs guesses sequentially

Hints Logic

- Too far: > 25 difference
- Very close: ≤ 25 difference
- You win: exact match

Inputs

User Input

Number between 1 and 100

Input Validation

Rejects numbers outside valid range

Outputs

Correct Guess

"The Guess is True, you win!" message

Far Guess

"The Guess is false, Too far."

Close Guess

"The Guess is false, Very close."

Invalid Input

Prompts for retry if out of range

How It Works (Logic Flow)

Generate Number

`rand() % 100 + 1`

Get User Guess

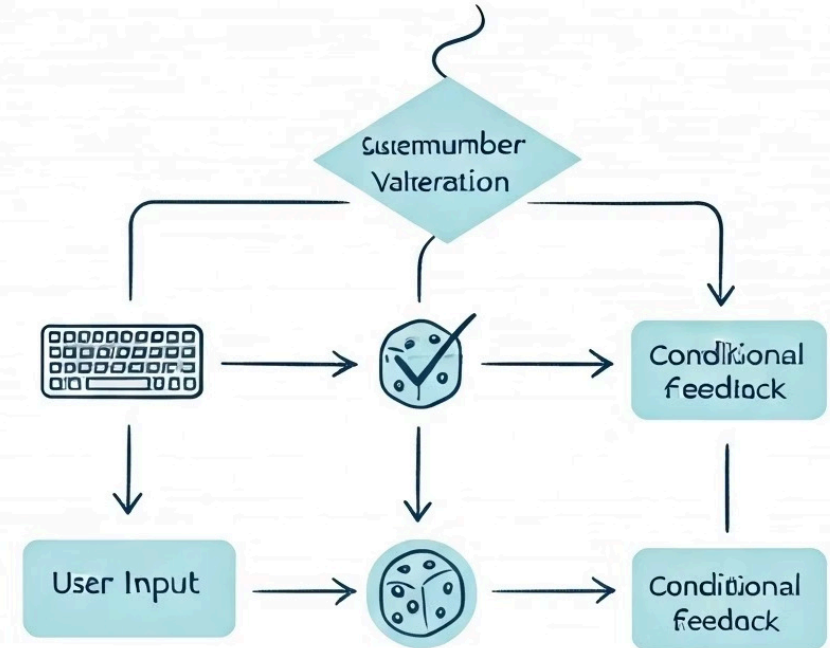

Input from 1 to 100

Validate Input

Check range, reprompt if invalid

Compare Guess

- Equal → Win
- Difference > 25 → Too Far
- Else → Very Close

Conclusion

Randomness

Using rand() and srand() functions

Input Validation

Ensuring valid user guesses

Conditional Logic

Hints and control flow using if-else

Control Structures

Foundations of loops and branching in C++
